

The Value of Decision Analysis: An Update

Bob Clemen,
Duke University

presented at:

Calgary DAAG Meeting

May 18, 2000

Session Outline

1. Update on questionnaire results
2. The Kodak experience
3. Some results on firm value
4. Discussion

1. Value of DA Survey

⌘ Reply at: www.tifoe.com/vadahome.html

⌘ Responses so far: 18

⌘ Information is being kept confidential

⌘ Please respond if you have not already done so!

1. Typical Decisions

- ⌘ Capital investments, Portfolio analysis
- ⌘ Strategic decisions
- ⌘ Technology adoption
- ⌘ Engineering or production decisions
- ⌘ New product development
- ⌘ Oil and Gas:
 - ⌘ Bidding, Exploration, Value of information
 - ⌘ Oilfield development, drilling strategy
- ⌘ Pharmaceuticals:
 - ⌘ R & D portfolio analysis
 - ⌘ Go/No go decision for R&D, FDA Phase III

2. Objectives in using DA money-related?

⌘ Yes!! (Still unanimous)

⌘ Specifically to:

- ☑ Increase revenue

- ☑ Save costs

- ☑ Enhance shareholder value

2b. Do you keep track of the value of DA?

⌘ No -- 14

⌘ Tracked informally -- 1

⌘ Some documentation of value -- 1

⌘ Value mgmt system just starting -- 1

⌘ Carefully tracked by analyst -- 1

2c. Estimate the value of DA?

- ⌘ Not measured or unknown. Unwilling to guess – $n=10$
- ⌘ \$10 - \$15 Million
- ⌘ "Many millions" per project "when applied well."
- ⌘ \$100 - \$500 million each year.
- ⌘ \$90 million per year on average, 1990-1999

3. Nonmonetary value of DA?

⌘ Decision-making process:

- ☑ Understand the problem/framing
- ☑ Alternative development
- ☑ Think strategically about alternatives using firm's objectives
- ☑ Understand trade-offs inherent in alternatives
- ☑ Capture expert knowledge
- ☑ Understand uncertainties

Nonmonetary value (cont.)

⌘ Decisions in the organization:

- ☑ Source of support/justification
- ☑ Audit decisions
- ☑ Speed up decision making

Nonmonetary value (cont.)

⌘ Communication and Commitment

- ☑ Focus discussion on assumptions rather than outcomes
- ☑ Common understanding
- ☑ Reach consensus
- ☑ Organizational alignment
- ☑ Achieve buy-in of managers, stakeholders

4. Are there detractors of DA?

⌘ YES

- ☑ Too much time and/or money -- not worth it.
- ☑ Modeling is not possible:
 - ☒ Problems too complex to be modeled
 - ☒ Probabilities are unreliable
 - ☒ Too much emphasis on \$ versus other aspects
- ☑ Modeling is bad:
 - ☒ Discourages creativity, intuition, "flashes of brilliance."
 - ☒ "Too quantitative"
 - ☒ Poor analysis can produce overconfidence in decision

4. Detractors of DA, cont.

⌘ NO

☑ 3 out of 18 claim no detractors!

☑ "... not practiced in the breadth of DA to have this happen."

5. How many decisions made with DA?

1%	4
2% - 9%	5
10% - 24%	3
25% - 50%	3

Firm A:

- ☑ 100% portfolio analyses
- ☑ DA-related tools used throughout organization

But differs across an organization:

Firm B:

- ☒ 90% of capital-expenditure decisions
- ☒ 100% of units use DA for strategic development
- ☒ 5% of technology decisions

2. The Kodak Experience

- ⌘ Based on “The Value of Decision Analysis at Eastman Kodak Company, 1990-1999,” with Bob Kwit, forthcoming in Interfaces.
- ⌘ Records kept by Bob Kwit on 178 projects over ten years.
- ⌘ Download the paper from:
www.duke.edu/~clemen/work.htm

Statistics for 178 projects

⌘ Average duration: 78

⌘ Average analyst hours: 81

⌘ Study focus:

☒ Decision and Risk Analysis:	47%
☒ Strategy	16%
☒ Modeling	11%
☒ Portfolio Analysis	7%
☒ Trade-offs	5%
☒ Others	15%

How to measure value?

⌘ Momentum strategy?

- ☑ Records not kept
- ☑ Not always obvious (e.g., what new product to develop?)

⌘ Base on Expected NPV of alternatives?

- ☑ Exactly what to calculate?
- ☑ What about nonmonetary value?

Value measures used

$$\text{⌘} V1 = \text{ENPV}(\text{Best Alt}) - \text{ENPV}(\text{Second best})$$

$$\text{⌘} V2 = \text{ENPV}(\text{Best Alt}) - \text{Avg ENPV}(\text{All})$$

$$\text{⌘} V3 = \text{ENPV}(\text{Best Alt}) - \text{Avg ENPV}(\text{Others})$$

Example:

ENPV for 4 alternatives:

1) **\$20 m** 2) \$15 m 3) \$10 m 4) \$5 m

☒ $V1 = 5 \text{ m}$

☒ $V2 = 8.5 \text{ m}$

☒ $V3 = 10 \text{ m}$

Value results for 38 projects

⌘ Total value for 38 projects (\$ million):

☒ V1 253

☒ V2 487

☒ V3 621

Extrapolating to 178 projects

⌘ V1 \$740 million

⌘ V2 \$976 million

⌘ V3 \$1300 million

⌘ Conservative estimates, discarding incomplete projects, discounting others.

⌘ Other data from client questionnaires confirm value.

SmithKline Beecham

- ⌘ Based on Sharpe and Keelin, "How SmithKline Beecham Makes Better Resource-Allocation Decisions," HBR, March-April 1998
- ⌘ Developed DDP process for making R&D portfolio allocation decisions
- ⌘ By creating better alternatives for its development pipeline, SB increased shareholder value by **\$2.6 billion**
- ⌘ Matheson reports that it took SDG **three years** to build up SB's capabilities to do this.

3. Some results on firm value

⌘ Based on presentation by Jim Matheson,
“The link between organizational
intelligence and business results,”
INFORMS November, 1999

⌘ See *The Smart Organization* by Jim and
David Matheson, HBS Press, 1998

What is “organizational intelligence”?

Defined in *Smart Organization* according to 9 principles:

⌘ Achieve purpose

- ☑ Continual learning
- ☑ Value creation culture
- ☑ Creating alternatives

⌘ Understand environment

- ☑ Systems thinking
- ☑ Embracing uncertainty
- ☑ Outside-in strategic perspective

⌘ Mobilize resources

- ☑ Open information flow
- ☑ Disciplined decision making
- ☑ Alignment and empowerment

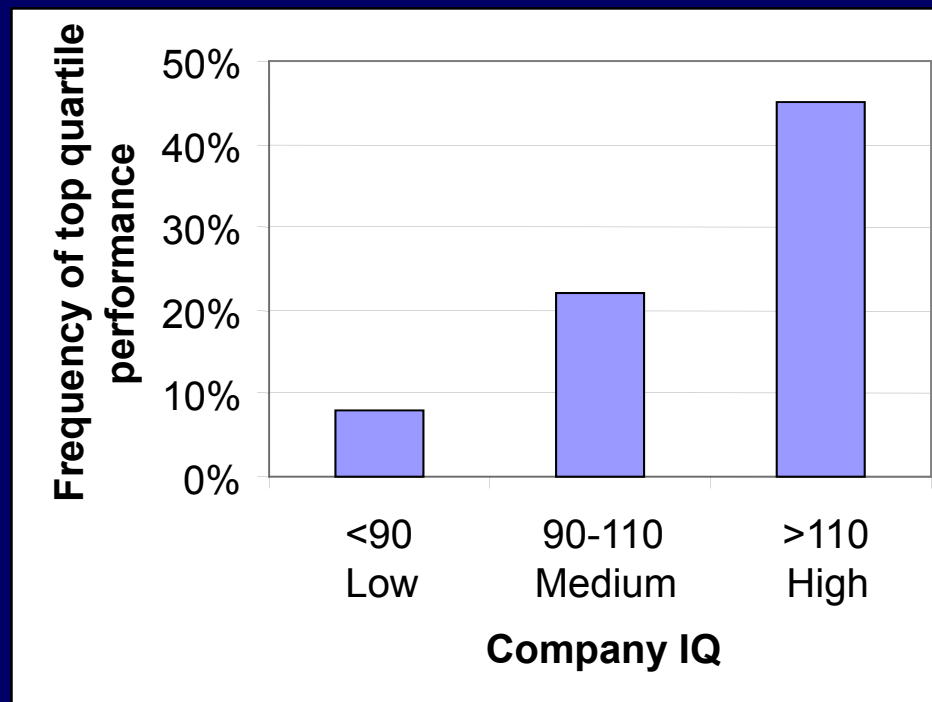

Data

- ⌘ Questionnaire in *Smart Organization* lets organizations measure their “organizational IQ”
- ⌘ In addition, ask firms to rate own
 - ☑ Market share/position
 - ☑ Profitability
 - ☑ Growth over last five years
- ⌘ Aggregate performance measure:
 - ☑ 15% Mkt Share, 35% Profitability, 50% Growth Rate

Results

⌘ “Smarter” companies perform better!

⌘ Also, high “IQ” strongly correlated with profitable growth.

Questions for Discussion

⌘ What evidence would show:

- ☑ That well-done DA is worth the time and \$
- ☑ That good DA modeling can deliver insights, even in complex problems. That it can be useful to quantify subjective uncertainty.
- ☑ That DA is not bad! It can enhance creativity, supplement intuition, and support the decision maker

Summary

⌘ Value is large and positive!

- ☑ \$1 billion at Kodak over 10 years

- ☑ Evidence from Matheson and Matheson shows good decision process positively associated with firm value

⌘ Getting the evidence is not easy!

- ☑ Respond to questionnaire

- ☑ Keep records

- ☑ Report your experience, share your stories.
